## ▲ Lookout Points

**Bowl Loop** .8 miles (Paved)

**La Brea Loop** 1.8 miles

**Community Loop** Community Center to Burke Roche Point then along upper Green Valley to Waterfall and back to Community Center 2.25 miles

The Baldwin Hills rise 500 ft. above the Los Angeles basin

- The mammals of the Baldwin Hills include the gray fox, raccoons, skunks, the desert cottontail, and opossums
- 166 bird species call this area home
- California quail, the state bird, have been known to live in these hills
- This area was originally in the domain of the Tongva Native Americans
- Oil was discovered in the Baldwin Hills in 1924
- Coastal prickly pears, the type of cactus most seen in the park, can grow to 5 ft high
- The name of the hills comes from E.J. "Lucky" Baldwin who purchased the land in 1875
- Both white and black sage are found in the park
- The habitat area is known as coastal sage scrub
